

# Capital One Bank

KI has supplied Capital One with a combination of lateral file and mobile storage solutions. Specified by MCM Architecture, KI 700 Series lateral filing and storage system and Smart Carts support Capital One's radical change to new ways of working.

Gary Peacock of Capital One explains: 'Flexibility is the theme behind the design and development of our new London office. For us, innovation is about finding the right furniture, technology, aesthetics and working practices to enable flexibility and deliver what our business requires from an office space.'

In order to maximise productivity and enhance spatial efficiency, the bedrock of Capital One's new work environment is a mixture of 84 assigned, unassigned and hotelling desks that support a population of 130 staff.

The crux of the concept is to provide centralised services – such as KI's lateral filing system – for access by associates. The provision of KI's Smart Carts, which are docked in convenient 'ports' complement the workstations, allowing associates to store personal effects and live files. The Smart Carts may be moved easily to whichever workstation the associate chooses. KI also supplied magnetic marker sheets from the award winning All Terrain range, which have proved popular for informal discussions and notes.

As Gary Peacock confirms, 'The design and innovations implemented in Capital One's new London office has successfully created a collaborative, efficient, technologically modern and scalable workspace environment.'

KI is a global leader in the design and manufacture of filing and storage systems. KI's multi-award winning document management systems range from high density archive solutions to cutting edge personal products for the world's leading organisations. Financial institutions such as Capital One join a prestigious roster of blue chip brands using KI solutions, these include Prudential, Abbey, Bank of America, IBM, Lehman Bros, Barclays Capital, Alliance & Leicester and Aegon.
