

Centrica has selected KI's 700 Series Lateral Filing and Storage system for their new Leicester facility. Designed by architects Watkins Gray International, the impressive interior houses over a thousand staff providing a range of services to customers in the business market under the British Gas brand.

Centrica's Business Services Project Manager, Sam Martin explains the organisation's contemporary work style, supported by the furniture selection:

***"From a business perspective it's fantastic that you're not actually allocated a space. Anybody can come and sit at any desk - we run two shifts during the day and one***

***in the evening. There are no pedestal drawers underneath the desk. We have a clear desk policy and everyone has a SmartBox, which makes it easy to carry things to their desk and put everything away at night in their storage system. Our people were used to more traditional ways of working, but I haven't had one negative comment since we moved here. Everyone has really bought into it."***

Before working with KI, Centrica had previously used tambour storage with pull out frames. By converting to the KI system Centrica achieved far greater flexibility for storage of a wide variety of media.
