

# PIVOTFILE™ ROTARY STORAGE by Spacesaver

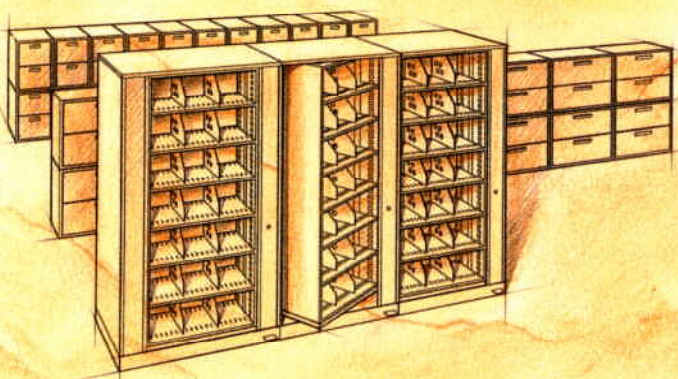

THE SPACE EFFICIENT AND COST-EFFECTIVE ALTERNATIVE TO LATERAL AND VERTICAL FILES

**PivotFile™ Rotary**  
Storage applications offer many high capacity and high access solutions:

- Next-to-Wall or Panel
- Built into an Alcove
- Back-to-Back High Density/High Access
- As a Room Divider
- Between Work Stations
- Counter-Height Applications
- Executive Offices
- With Secured Backs for Single-Sided Access

Shown here are five letter-size, seven-tier PivotFile units, configured as one Starter with four Adders.

Capacity and footprint comparisons demonstrate the superiority of PivotFile to both lateral and vertical files.

# PIVOTFILE™ ROTARY STORAGE DIMENSIONS

## *The Sky Is The Limit*

New expressions of versatility make the Spacesaver PivotFile your best choice in rotary storage. Demands on interior space are expanding. With Spacesaver's new PLUS sizes, PivotFile meets virtually every height requirement in the industry.

That means no wasted space when placed against panels or walls; no loss of openings when binders or oversized storage is what you need. Available in a palette of colors, or we can match your own special color for a slight upcharge. The powder coat finish is a rich, high-gloss texture.

### *Starter*

The first cabinet in any row of PivotFile units is always a Starter. This unit can stand alone, or Adder units can be connected to either side. Technologically superior to any rotating storage system, PivotFile accessories will conveniently store all your information effectively and efficiently in any of our 12 heights.

### *Adder*

Save valuable floor space by expanding capacity with Adders. Sharing the rotation space with its neighbor, the Adder reduces the necessary floor space of a Starter by 6 inches in width. The number of PivotFiles that can be connected together is limited only by the physical constraints of your space plan. For the ultimate in versatility, any Adder can be transformed into a Starter for additional flexibility.

### *Full Adder*

Where active files demand increased accessibility, the Full Adder allows the freedom of simultaneous access to adjoining units. Connected to a Starter, the Full Adder does not share rotation space with its neighbor, but it does share the flexibility of all PivotFile units. And like an Adder, the Full Adder can be converted to a Starter.
