

Fast growing TLT Solicitors has chosen the 700 Series lateral storage and filing systems from KI and Spacesaver for their impressive new offices in Bristol. TLT was awarded the coveted accolade of Regional Law Firm in 2004 and invested in a £2 million fit out of their offices to confirm their position as one of the country's leading practices. To date over 500no. 700 Series cabinets have been installed. TLT has found the Spacesaver steel shelving ideal to accommodate the diverse media that holds the information at the heart of their business as it is easily assembled and reconfigured.

"We are different and we are growing. TLT was created five years ago and our growth and success in that time has been impressive. KI's systems are able to quickly and cost effectively evolve with us" - Practice Director Steve Willson.

TLT appointed Interaction to manage and design the project, with a clear brief to produce a working environment that encouraged communication, enhanced productivity and provided a clean contemporary aesthetic.

Interaction specified KI's 700 Series to create a true systems approach to TLT's document management needs. 1067mm wide units were specified throughout to maximise use of space and provide flexibility to handle future growth and increase densities. This footprint is further enhanced by the tailored approach of the KI System – each department is able to create unique combinations of internal fittings to manage widely different media from suspension files to shelf filing. The elegant design of KI's systems also makes a significant contribution to the understated crispness of the interior scheme.
