

Unilever engaged KI to provide solutions for its Pensions, Marketing, Corporate Research, Ice Cream, Beverages, and Frozen Foods divisions at its Walton on Thames UKNM and Colworth R&D sites. Several of KI's storage, seating and screening product ranges were used.

Graham McPhail, of Unilever's Property Team in Walton upon Thames said *"KI impressed us with their clear understanding of our needs. KI provide high value solutions which offered us all the flexibility and capacity we were looking for to meet our furniture requirements now and as they evolve"*. He added; *"KI's quality service and speed are consistently high. They are able to tailor solutions to our specific requirements quickly and without compromise"*.

700 Series was colour matched to Unilever's blue with no additional charge or leadtime. The blue units were used in open plan areas with curved tops to keep surfaces clear of clutter. Combinations of flipper doors, drawers and cupboard doors provided the optimum opening sizes and types to maximise use of vertical space, provide flexibility to adapt to current and future media types and reduce churn/ FM costs. 1067mm wide drawers were also used to maximise the benefits of SmartBox and SmartFile from the KI Smart Solutions media range and provide 3 rows of A4 front to back in a single drawer. Several other tailored 700 Series configurations were also designed for efficient storage of video tape and disk storage.

700 Series was also used in neutral silver around the core walls where a combination of flipper doors, drawers and stacked overfile cupboards made full use of the floor to ceiling height.

KI Spacesaver mobile high density storage with individual lockable carriages was used to provide additional levels of density and security for a range of confidential information and company seals.

KI has serviced Unilever's information management and storage requirements since 2001.
