

Chase Manhattan

Financial services providers are particularly successful users of flexible lateral filing solutions as part of a contemporary workplace strategy. KI are leading the field in this area by working closely with customers and architectural consultants to provide intelligent answers to the questions raised by new working practices.

Major KI clients in the financial sector such as Barclays Capital, Lehman Bros, Deutsche Morgan Grenfell and West Merchant Bank seek flexible configurations that manage a range of media but also look to KI to offer added value in areas such as space management as well as cable management.

Chase Manhattan Bank's City offices, interiors designed by Architects Pringle Brandon, elegantly use KI's 700 Series to solve a number of storage issues.

Shared access to day-to-day documents is an essential requirement for team areas. Two, three and four high units manage a combination of hanging files, box files and disks spaceefficiently whilst minimising retrieval times. Machine tables for printers (at the end of dealer desk runs) integrate low KI storage units to maximise floor space and to provide convenient access to stationery and peripherals.

The breadth of KI's range is illustrated by high cupboards which hold large volumes of irregularly accessed semi-archive storage, making use of dead areas around the service core. This range of solutions illustrates KI's systematic approach to customer needs.

Location	London
Architect	Pringle Brandon
Dealer	Sapphire Environments
Product	700 Series KI Smart Solutions inc. SmartBox & SmartFile
