Standard Life Bank

Standard Life Bank has chosen a programmable electronic controlled mobile storage system from Spacesaver, a division of KI. The installation at the Bank's impressive new Edinburgh headquarters houses thousands of title deeds- and provides sophisticated safety and security devices. Colin Smillie, Standard Life Bank's Senior Space Planner, comments:

'In the past we stored title deeds on static steel racking, but for One Conference Square we needed a far more intelligent document management system. The Spacesaver mobile storage system houses twice the number of documents in the same floor area as the racking, and also offers the safety and security features we need. Spacesaver has infra-red beams at three points across the aisle, the length of the aisle and at the entrance to the aisle- it's the only system I know with this safety feature. Some products rely on kick plates- you have to put your foot out to stop the unit. With Spacesaver you just press 'go'- and you don't have to do anything else. It's a sophisticated system. We worked closely with Infotrieve- who supply us with storage elsewhere in the Bank- to get the right solution.'

Colin Smillie explains the the One Conference square headquarters rationalises the bank's estimate and will ultimately house 1800 staff. 'We like the future proofing features Spacesaver offers. We can link the mobile storage to the building system which, for example, allows us to programme the system to circulate air around the documents at night. We can also link the storage to the building's fire system or automatically select and retrieve documents. We are very impressed by the Spacesaver system.
