KI have provided a highly space efficient integrated filing solution for Willis, the global insurance broker at their new headquarters, 51 Lime Street, London.

Designed by world-renowned architects Foster + Partners, the Willis Building is located opposite the Lloyd's Building and its smooth, concave curves hold a faceted reflection of its neighbour. Swanke Hayden Connell designed the interior of the building.

Over 2,000 Willis personnel from four offices across London have united under one roof in the state-of-the-art "greenscraper" which is a testament to energy-efficient, sustainable architecture. The Willis Building has an "excellent" BREEAM (Building Research Establishment Environmental Assessment Method) sustainability rating.

Willis and Swanke Hayden Connell worked with KI and studied the filing they already had to ascertain how much storage would fit on each floor. KI installed over 1800 of its 700 Series 1067mm wide, 3 drawer cabinets enabling Willis to achieve significant increases in the density of A4 paper each department could file over standard 1000mm wide units. The cabinets deliver this added capacity for many different types of media including suspension files, binders and A4 pocket wallets.

As stated by Peter Smith, Vice President – Global Real Estate and Facilities, Willis:

"KI were very helpful. They were recommended to us by our Dublin office Project Manager at Willis Ireland, who had found them most knowledgeable and had given them a great service. We therefore, included them on the tender list and were delighted to find KI very competitive. In addition, they offered a solution to hold all storage we required."

The 700 Series cabinets, in a powder coated metallic finish with light wood tops, have been located along the walkways, dividing the areas. In addition 700 Series laterals with overfile cupboards were fitted into alcoves in the

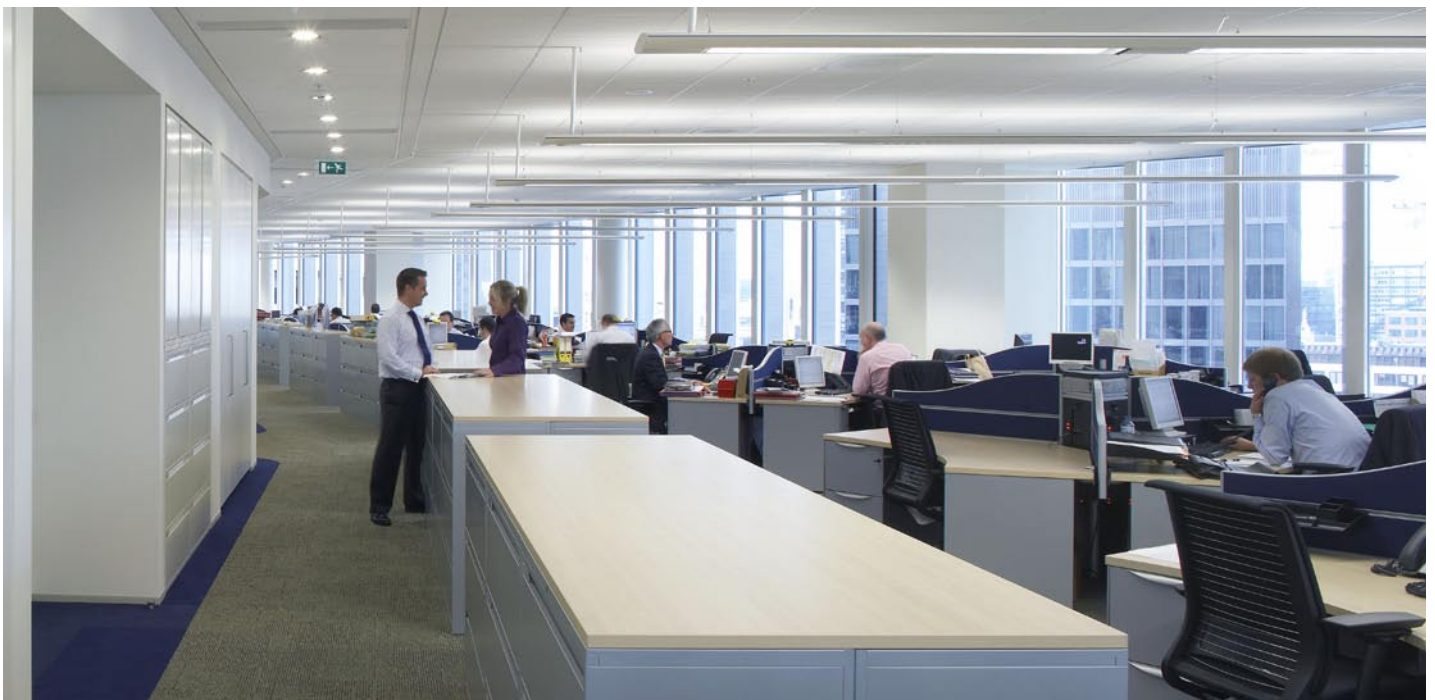

core of each floor. PivotFile rotary storage was also installed in areas with particularly high volumes of paper files.

KI designs and manufactures furniture which is safe, aesthetically pleasing, affordable and helps customers earn points toward LEED certification. GREENGUARD certification covers all products specified in the building interior including furniture. GREENGUARD certified furniture earns companies points when applying for certification under the LEED for Commercial Interiors. KI is also ISO14001 certified. For a full list of KI's certified products please go to:
